SCIENCE + TECHNOLOGY

SOFTWARE DIRECTORY

SECOND EDITION

June 1990

Saskatchewan

91-02322/

Introduction

This second edition of the **Software Directory** was compiled by the Science and Technology Division of Saskatchewan Economic Diversification and Trade. It is based on information obtained through a survey of Saskatchewan software developers, and provides an inventory of their current capabilities, products and services.

Every attempt has been made to canvas as many companies as possible within the broadest context of software developers. Any omissions are unintentional and the result of lack of knowledge of a company's existence, or lack of response by the company to the survey questionnaire.

While every effort has been made to ensure completeness and accuracy, the Science and Technology Division disclaims any responsibility or liability for costs or damages that may be incurred through use of all or part of the information contained within these pages.

Distribution of this Directory and the appearance or absence of a company herein is not to be considered an endorsement or non-endorsement of a specific company, product or service.

The Science and Technology Division gratefully acknowledges the co-operation of Saskatchewan firms through the various phases of this project.

We welcome your questions, comments, or requests for additional copies of this Directory. Please contact Saskatchewan Economic Diversification and Trade, Science and Technology Division:

A Message From The Premier.

On behalf of the Government of Saskatchewan, I am pleased to introduce the Department of Economic Diversification and Trade's 1990 Saskatchewan Software Directory.

The 1990's will be a decade of remarkable change. Our ability to manage change effectively will dictate our success in the increasingly competitive global marketplace. The imagination and energy of the entrepreneur will be challenged with new and exciting opportunities unimaginable only a few years ago.

Saskatchewan people have always welcomed a challenge. The challenge of the information age will be no exception. Our world-class companies and software products covering the fields of data communication, farm management, geographic information systems, image and database management, and healthcare related products have gained international recognition. The Saskatchewan Software Directory, strategically placed in the hands of world buyers will send a clear message that we are truly "open for business".

Grant Devine
Premier

A Message From The Minister

I am proud to introduce the Second Edition of the Saskatchewan Software Directory.

Whether it is through the use of automatic bank tellers, credit card drug plan administration, computer assisted education or home computer games, the information technology industry has a profound impact on our daily lives.

Software is the common denominator in information technology. Without software, many of the conveniences and services we take for granted simply wouldn't work.

The rapid advance of computer technology creates a constant software void. The challenge to Saskatchewan's developers and programmers is to apply technology in every field of business, maximizing economies of time and money to a degree never before achieved.

This directory is a showcase of the achievements of Saskatchewan entrepreneurs who have taken up the challenge in providing internationally competitive state-of-the-art software products. Through their efforts, Saskatchewan software firms now number 84, employing over 1000 people.

I invite you to take advantage of the information contained in the Saskatchewan Software Directory to assist with your purchasing decisions. The directory provides an excellent tool for accessing the wide range of expertise, services and products developed in Saskatchewan.

Hon. Grant Schmidt
Minister
Saskatchewan Economic Diversification and Trade

Government Programs

The following programs are available through the Science and Technology Division of Saskatchewan Economic Diversification and Trade:

THE INDUSTRIAL RESEARCH PROGRAM

Intended to complement federal R & D programs by providing support where federal assistance is insufficient from a provincial perspective.

THE JOINT HIGH TECHNOLOGY RESEARCH PROGRAM

Supports research projects in areas of mutual government and industry interest. It provides assistance for research activities performed by industrial companies and supported by the province in technology fields of high provincial priority

THE REQUEST FOR PROPOSALS PROGRAM

Assists Saskatchewan companies to compete for large development projects originating outside the province.

THE INFORMATION TRANSFER PROGRAM

Provides opportunities to bring industry-oriented technological information into the province through activities such as seminars, conferences, and invited speakers.
